WEB TECHNOLOGIES

Assignment

Subject Code: 22UCS513C Semester: V Division: A and B

Faculty: Shilpa. P. Madhavanavar

Last date for submission: 20/11/2025 (before 4pm)

1. Define Anchor tag with an example.
2. List the types of Style sheets.
3. Define image tag with an example.
4. Define Ordered list with an example.
5. Define Heading Tags with an example.
6. What is JavaScript? Write the advantages of JavaScript
7. What is the difference between GET and POST methods in JavaScript.
8. What is the scope of the variables in JavaScript.
9. Define Event. How events are handled in JavaScript.
10. What is DATE object in JavaScript.
11. a) Explain the structure of the HTML webpage with an example.

    b) Define List Tag with an example.

12. Define Frameset, iFrame Tag. Divide the webpage into four equal parts each individual part displays different web page.
13. Define Form tag. Design a Registration page by using all Form controls.
14. Define Table tag and their attributes with an example.
15. Explain about Cascading Style Sheets with an example.
16. Explain various operators and datatypes available in javascript with examples.
17. a) What is the need of scripting languages in web Technologies.

    a. Build a JavaScript program to convert temperature from Celsius to Fahrenheit and vice versa.

18. Explain Document Object Model with suitable examples and code.

19. a) What is JavaScript? What are the features of JavaScript?

a. Design a JavaScript to display whether given number is prime or not.

20. Explain about Function definition, Function calling, Function parameter, return type with a suitable example in JavaScript.

21. Design a PHP program to print reverse of any number

22. Define PHP Function.

23. List various types of arrays supported by PHP. How to declare arrays in PHP.

24. What is the use of $ symbol in PHP, explain with an example.

25. Design a PHP code to swap any two numbers

26. List any two advantages of PHP.

27. Write the structure of PHP script with an example.

28. List various String Functions in PHP.

29. What are the data types supported by PHP.

30. What is the difference between JavaScript and PHP.

31. Define an Array? Explain about the types of Arrays in PHP with an example.

32. Explain variables and operators with example in PHP

33. Explain the predefined and user defined functions in PHP with an example.

34. Explain database connectivity in PHP with reference to MYSQL.

35. a) Define Session and Cookies. Explain with an example program.

a. List and explain the Control structures used in PHP.

36. How to read data from web form control like Check boxes explain with an example.

37. a) Design a PHP script for uploading a file to the server and display the uploaded files details.

a. List and explain the string functions in PHP

38. What are the differences between Get and post methods in form submitting? Give the case where we can use get and we can use post methods

39. List the statements that are used to connect PHP with MySQL with an example.

40. a) How to read data from web form control like Textboxes explain with an example.

a. Explain about Conditional Statements in PHP.

41. a) What is HTML? What are differences between HTML and HTTP? What are the essential or fundamental HTML tags in a web page?

b) Create a web page using frames which contains two columns. The left frame contains five hyperlinks namely: books, pens, watches, bags and shoes. When the user clicks on a link (for example books) in the left frame, a webpage should load in the right frame which contains details about the items like book cover image, book publisher name, book price and add to cart button for books category. Initially, display a welcome page in the right frame.

42. a) What is CSS? What are the differences between HTML and CSS? What are the different ways for specifying CSS in developing web pages?

b) Create a webpage which contains a table for displaying your personal details like name, age, father name, mobile no, address, branch, email and gender. Follow the below requirements:

i. Display your picture in the top right corner of the web page as a background image.

ii. Display the table header background in red color and the text in white color.

iii. Display email row in bold font.

iv. Table should have a dashed, 1px width, grey color border.

Use only external CSS to specify the styling information in the above webpage.

43. a) What is Javascript? What are the differences between HTML and Javascript? Display a login form and validate the username and password fields using Javascript.

b) What is PHP? What are its uses? Using PHP insert the following details of a book into MYSQL database:

i. Book name

ii. Book author(s)

iii. Book description

iv. Book price

v. Book image url

Task 1

Design the following pages required for a online book store website:

1) Homepage:

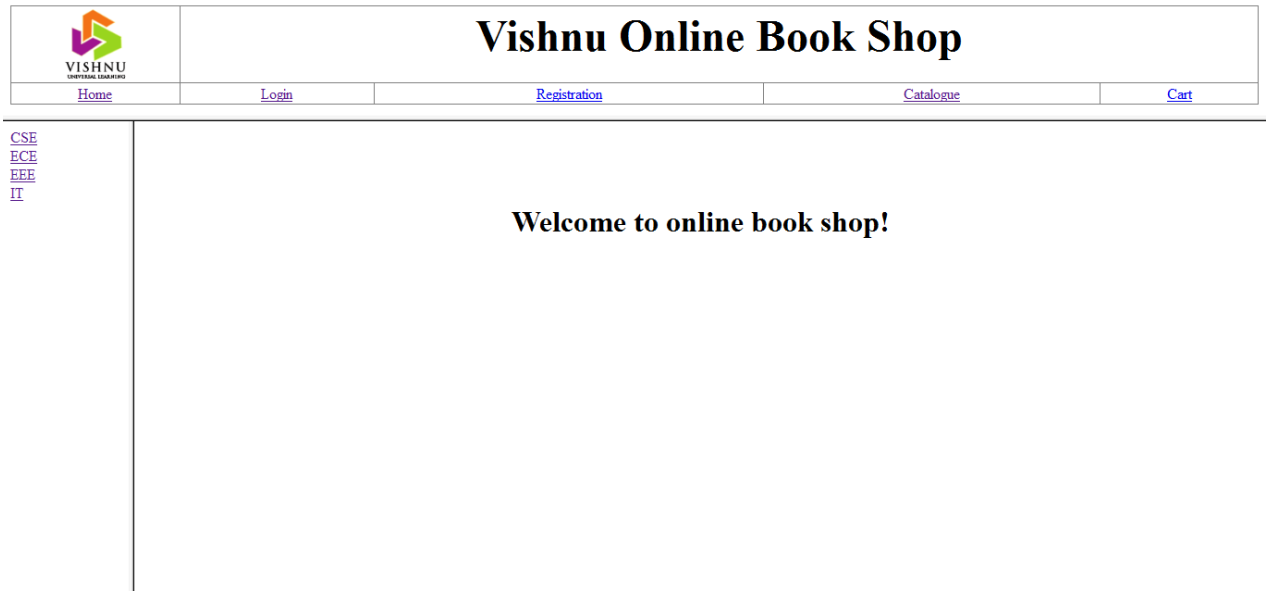
The static homepage must contain three frames.

Top frame: This frame should contain logo and college name followed by links to Homepage, Login page, Registration page, Catalogue page and Cart page.

Left frame: Atleast four links for navigation, which when clicked displays the respective catalogue page in the right frame.

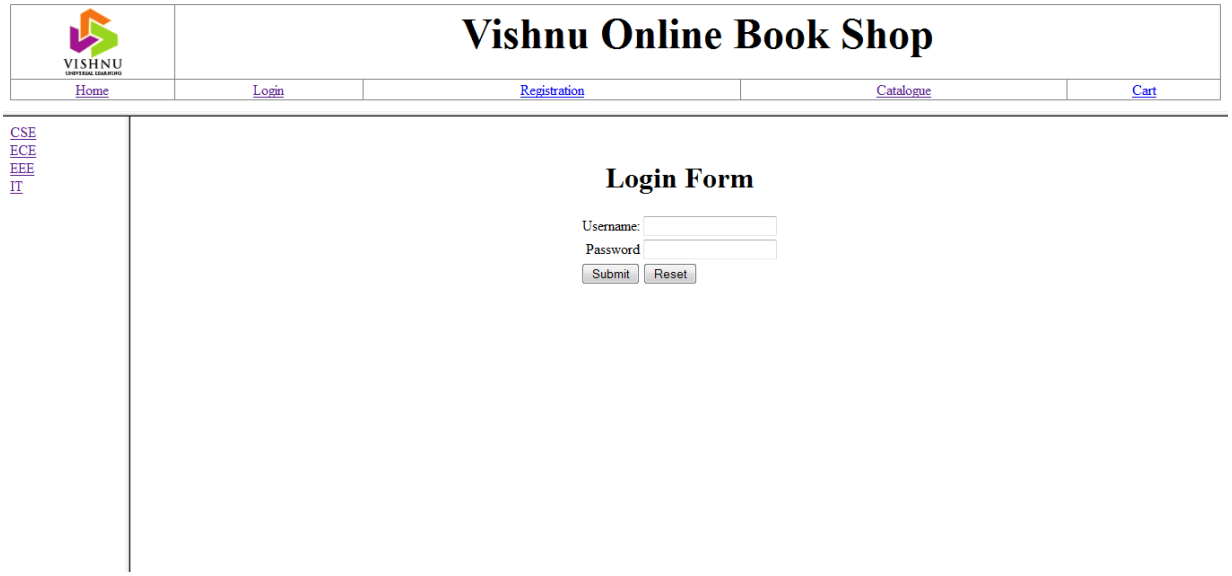
Right frame: The pages to the links in the left frame must be loaded in this frame. Initially, this

frame contains the description of the web site.



2) Login page:

This page looks like below:

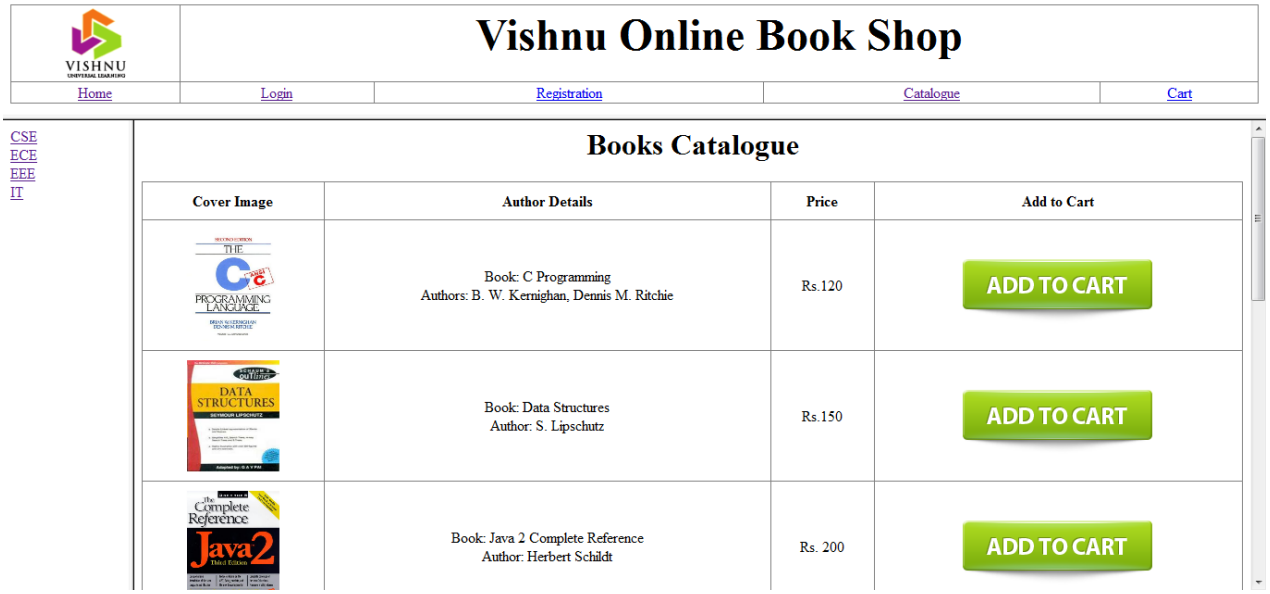


3) Catalogue Page:

The catalogue page should contain the details of all the books available in the website in a table.

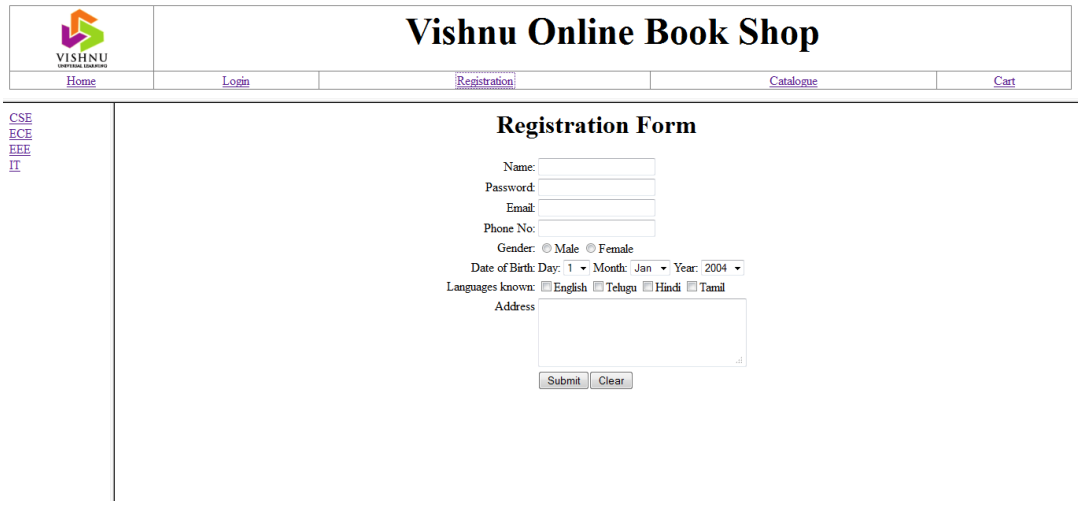
The details should contain the following:

1. Snapshot of the cover page
2. Author name
3. Publisher
4. Price
5. Add to Cart button



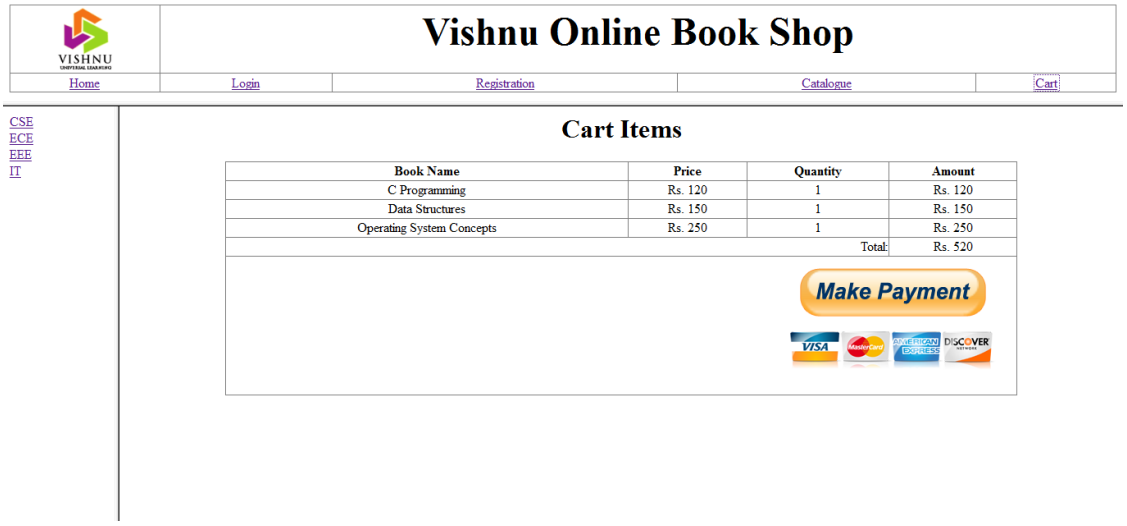
4) Registration Page

Create a registration page as shown in the below image.



5) Cart Page

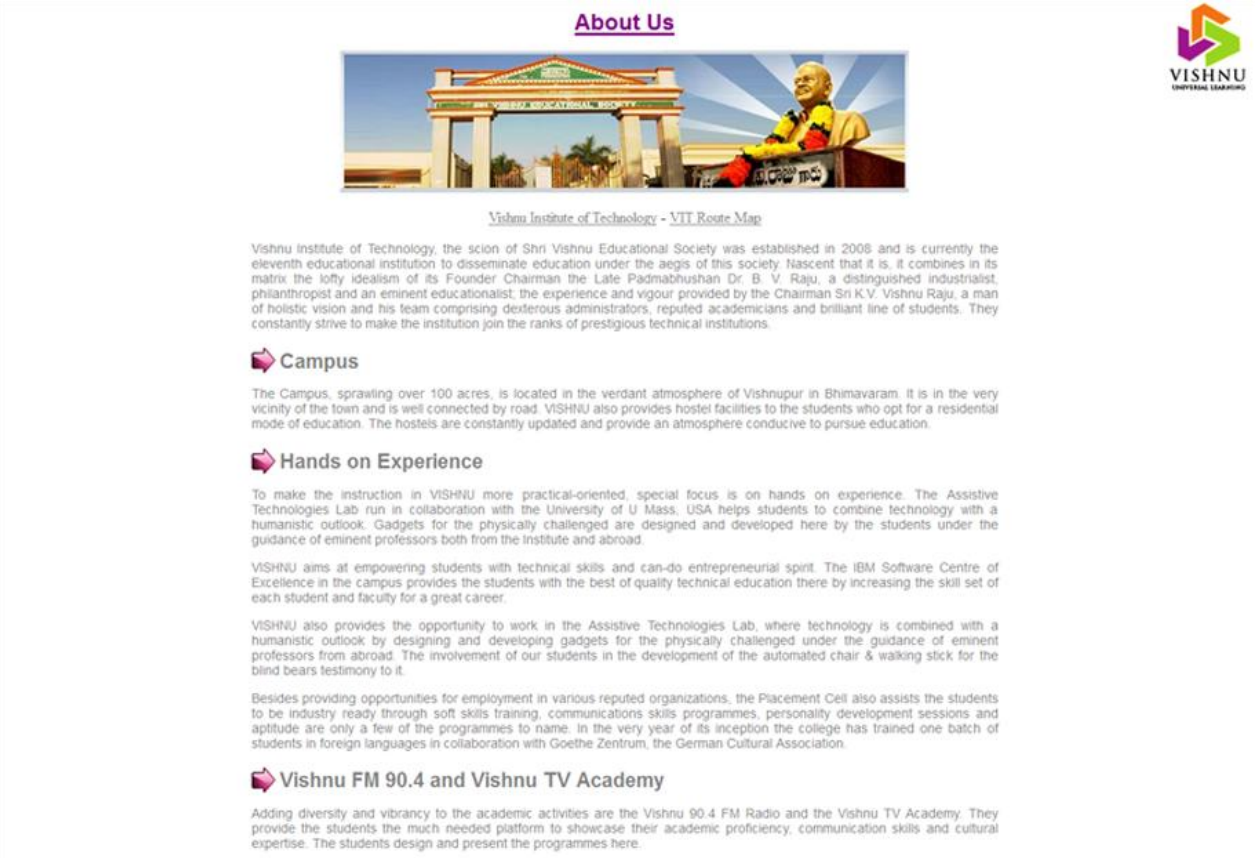
Create a static cart page which contains dummy data and a **Make Payment** button as shown in the image below.



Task 2

This task let's you gain hands on experience on CSS (Cascading Style Sheets).

Have a look at the below image and create a similar webpage using only external CSS.



About Us

Vishnu Institute of Technology - VIT Route Map

Vishnu Institute of Technology, the scion of Shri Vishnu Educational Society was established in 2008 and is currently the eleventh educational institution to disseminate education under the aegis of this society. Nascent that it is, it combines in its matrix the lofty idealism of its Founder Chairman the Late Padmabhushan Dr. B. V. Raju, a distinguished industrialist, philanthropist and an eminent educationalist; the experience and vigour provided by the Chairman Sri K.V. Vishnu Raju, a man of holistic vision and his team comprising dexterous administrators, reputed academicians and brilliant line of students. They constantly strive to make the institution join the ranks of prestigious technical institutions.

Campus

The Campus, sprawling over 100 acres, is located in the verdant atmosphere of Vishnupur in Bhimavaram. It is in the very vicinity of the town and is well connected by road. VISHNU also provides hostel facilities to the students who opt for a residential mode of education. The hostels are constantly updated and provide an atmosphere conducive to pursue education.

Hands on Experience

To make the instruction in VISHNU more practical-oriented, special focus is on hands on experience. The Assistive Technologies Lab run in collaboration with the University of U Mass, USA helps students to combine technology with a humanistic outlook. Gadgets for the physically challenged are designed and developed here by the students under the guidance of eminent professors both from the Institute and abroad.

VISHNU aims at empowering students with technical skills and can-do entrepreneurial spirit. The IBM Software Centre of Excellence in the campus provides the students with the best of quality technical education there by increasing the skill set of each student and faculty for a great career.

VISHNU also provides the opportunity to work in the Assistive Technologies Lab, where technology is combined with a humanistic outlook by designing and developing gadgets for the physically challenged under the guidance of eminent professors from abroad. The involvement of our students in the development of the automated chair & walking stick for the blind bears testimony to it.

Besides providing opportunities for employment in various reputed organizations, the Placement Cell also assists the students to be industry ready through soft skills training, communications skills programmes, personality development sessions and aptitude are only a few of the programmes to name. In the very year of its inception the college has trained one batch of students in foreign languages in collaboration with Goethe Zentrum, the German Cultural Association.

Vishnu FM 90.4 and Vishnu TV Academy

Adding diversity and vibrancy to the academic activities are the Vishnu 90.4 FM Radio and the Vishnu TV Academy. They provide the students the much needed platform to showcase their academic proficiency, communication skills and cultural expertise. The students design and present the programmes here.

Use the following in the external CSS file:

1. Use font properties like (font-size, font-family) and text properties like (color, text-decoration).
2. Set the background image in the top right position as shown in the above web page using the background properties (background-image, background-repeat, background-position).
3. Create two hyperlinks as shown in the above webpage and use all five pseudo classes (link, visited, focus, hover and active).
4. For the two hyperlinks, assign the class attributes as xlink and hlink respectively and apply the ***cursor*** property in the CSS file like .xlink { cursor: crosshair;} and .hlink { cursor: help;}

Task 1

Validate the registration form developed in Task 1using ***external*** JavaScript.

Satisfy the following requirements:

1. Name should contain alphabets and the length should not be less than 6 characters.

2. Password should not be less than 6 characters.
3. Email-id should be in valid format (Ex: xyz@domain.com)
4. Phone number should contain only 10 digits.

Task 2

Validate the login form developed in Task 2 using ***external*** JavaScript.

Note: Display appropriate error messages using either *document.write()* or *alert()* mechanisms. Also try to do the same by using *document.getElementById()*.

Task 1:

Use PHP to store the following details in the MYSQL database:

– Name

– Password

– Email

– Phone no

Use the files created in Task 1 and 2(if needed).

Hint (use if needed):

Use following functions in PHP to work with MYSQL database:

mysql_connect(hostname, username, password)

mysql_select_db(database_name)

mysql_query(query_to_execute)
